Threat Level	Medium

- Tagging is a simple way to attach a classification to an event.
- In the early version of MISP, tagging was local to an instance.
- After evaluating different solutions of classification, we build a new scheme using the concept of machine tags.

Machine Tags

- Triple tag or machine tag was introduced in 2004 to extend geotagging on images.

admiralty-scale:source-reliability="c"

namespace predicate value

- A machine tag is just a tag expressed in way that allows systems to parse and interpret it.
- Still have a human-readable version:
 - admiralty-scale:Source Reliability="Fairly reliable"

MISP Taxonomies

- Taxonomies are implemented in a simple JSON format.
- Anyone can create their own taxonomy or reuse an existing one.
- The taxonomies are in an independent git repository¹.
- These can be freely reused and integrated in other threat intel tools.

¹<https://www.github.com/MISP/misp-taxonomies/>

Existing Taxonomies

- NATO - **Admiralty Scale**
- CIRCL Taxonomy - **Schemes of Classification in Incident Response and Detection**
- eCSIRT and IntelMQ incident classification
- EUCI **EU classified information marking**
- Information Security Marking Metadata from DNI (Director of National Intelligence - US)
- NATO Classification Marking
- OSINT **Open Source Intelligence - Classification**
- TLP - **Traffic Light Protocol**
- Vocabulary for Event Recording and Incident Sharing - **VERIS**

Want to write your own taxonomy? 1/2

```
1 {
2   "namespace": "admiralty-scale",
3   "description": "The Admiralty Scale (also called the NATO
4     System) is used to rank the reliability of a source and
5     the credibility of an information.",
6   "version": 1,
7   "predicates": [
8     {
9       "value": "source-reliability",
10      "expanded": "Source Reliability"
11    },
12    {
13      "value": "information-credibility",
14      "expanded": "Information Credibility"
15    }
16  ],
17  ...

```

Want to write your own taxonomy? 2/2

```
1 {
2   "values": [
3     {
4       "predicate": "source-reliability",
5       "entry": [
6         {
7           "value": "a",
8           "expanded": "Completely reliable"
9         },
10    ....
```

- Publishing your taxonomy is as easy as a simple git pull request on [misp-taxonomies](https://github.com/MISP/misp-taxonomies)².

How are taxonomies integrated in MISP?

10	✘	TO:HIDE		2	 
9	✘	TODO		8	 
11	✘	TODO:VT-ENRICHMENT		9	 
1	✔	Type:OSINT		932	 
18	✔	admiralty-scale:information-credibility="1"	admiralty-scale	0	 
19	✔	admiralty-scale:information-credibility="2"	admiralty-scale	1	 
20	✔	admiralty-scale:information-credibility="3"	admiralty-scale	3	 
21	✔	admiralty-scale:information-credibility="4"	admiralty-scale	0	 
22	✔	admiralty-scale:information-credibility="5"	admiralty-scale	1	 
23	✔	admiralty-scale:information-credibility="6"	admiralty-scale	2	 

- MISP administrator can just import (or even cherry pick) the namespace or predicates they want to use as tag.
- Tags can be exported to other instances.
- Tags are also accessible via the MISP REST API.

Filtering the distribution of events among MISP instances

- Applying rules for distribution based on tags:

Set push rules

Allowed Tags tip:white	Available Tags Type:OSINT tip:green tip:amber tip:ex:chr admiralty-scale:informatic	Blocked Tags circl:topic="finance"
Allowed Organisations CIRCL	Available Organisations ADMIN	Blocked Organisations

Other use cases using MISP taxonomies

- Tags can be used to set events for further processing by external tools (e.g. VirusTotal auto-expansion using Viper).
- Ensuring a classification manager classifies the events before release (e.g. release of information from air-gapped/classified networks).
- Enriching IDS export with tags to fit your NIDS deployment.

Future functionalities related to MISP taxonomies

- Sighting support (thanks to NCSC-NL) will be integrated in MISP allowing to auto expire IOC based on user detection.
- Adjusting taxonomies (adding/removing tags) based on their score or visibility via sighting.
- Simple taxonomy editors to help non-technical users to create their taxonomies.
- More public taxonomies to be included.
